

VISITOR VIRUS RISK ASSESSMENT TOOL

AUTOMATED COVID-19 RISK ASSESSMENT & COMPLIANCE

AUTOMATED COVID-19 RISK ASSESSMENT FOR VISITORS. SOCIAL DISTANCING COMPLIANCE.

We have created a COVID-19 Risk Assessment Tool, as an extension to our enterprise class Visitor Management Systems. As part of the pre-registration process visitors can be proactively assessed for travel to restricted countries, exposure to other individuals showing signs of the virus and whether they are exhibiting symptoms commonly associated with COVID-19.

Enterprises will need to take responsibility for the security and safety of employees, visitors, vendors and contractors. It all starts with protecting the front lobby processes in the attempt to contain physical and biological threats. IBS integrates their Visitor Management System with other enterprise systems such as access control, email and calendaring systems and directory services with ability to:

Enhance Security Operations

- Connect the lobby process to the rest of the enterprise
- Extend the virtual perimeter
- Assess risk prior to visitors coming onsite

ASSESS RISK AND TAKE ACTION

- Pre-registration sends out automatic risk assessment
- Did visitor visit exposed areas with contact risk
- Follow CDC and DHHS guidelines
- Built-in Room Booking, Guest Wi-Fi and Wayfinding

SECURE YOUR WORKPLACE PROTECT YOUR PEOPLE

- Follow guidelines from national health authorities
- Comply with Social Distancing Guidelines
- Setup special rules for onsite access
- Automatically enter denied individuals on a watch list
- Deny access prior to high risk visitors arriving onsite

Leverage AI and machine learning to monitor and predict when visitor types may impact employee populations, keeping them safe.

Burglar Alarms

Fire Detection

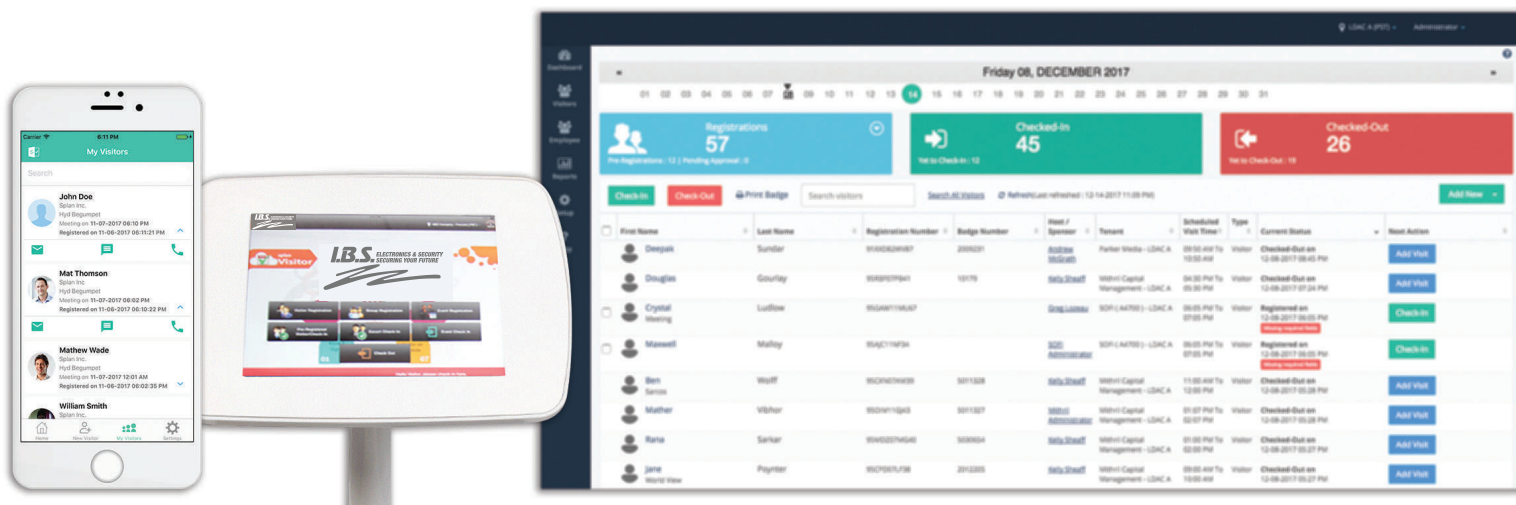

Video Surveillance

Access Control

Audio/Video Communications

INTELLIGENT & FULLY AUTOMATED VISITOR MANAGEMENT

VISITOR EXPERIENCE

- Pre-registration email with all details - Date, Time, Directions, Map, QR Code
